Gallery
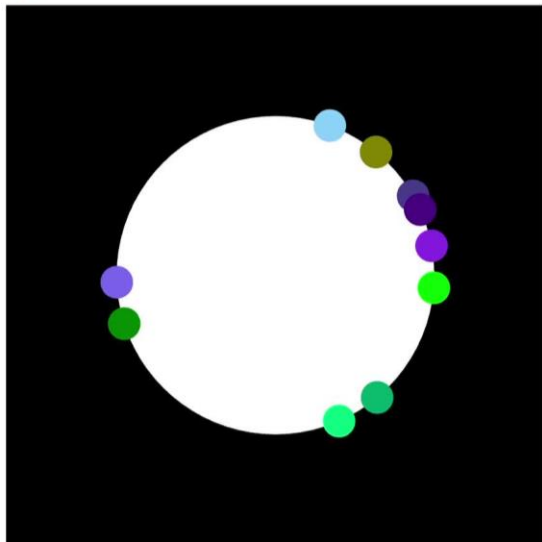

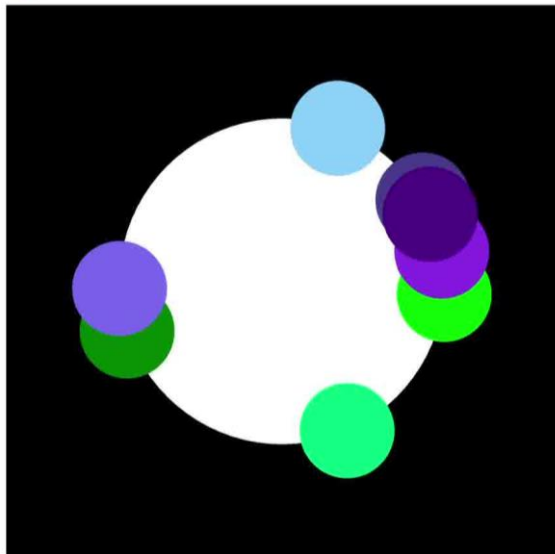

Feature 1: This image shows the circular disk centered at origin. The player is viewing the disk from above.

Feature 5: We can see the bacteria generates 10 bacteria of different colours.

Feature 6: We can see the bacteria appear at the curst of the circumference of the disk

Feature 2: Here we can see the bacteria growing on the circumference of the disk at an arbitrary spot. We can see that they are going uniformly.
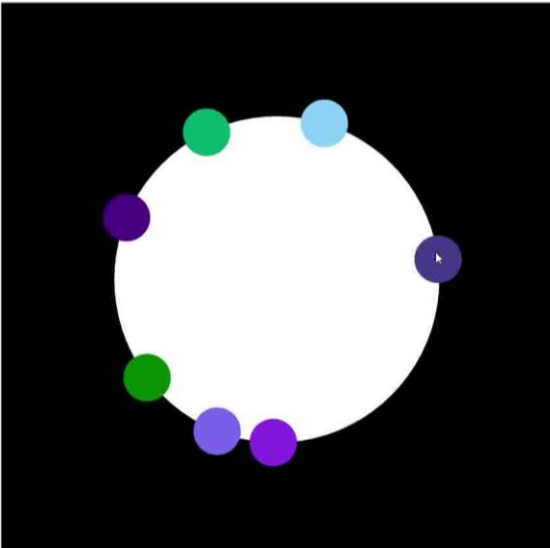

Feature 7: Here we can see the player loses when the bacteria grows past a threshold

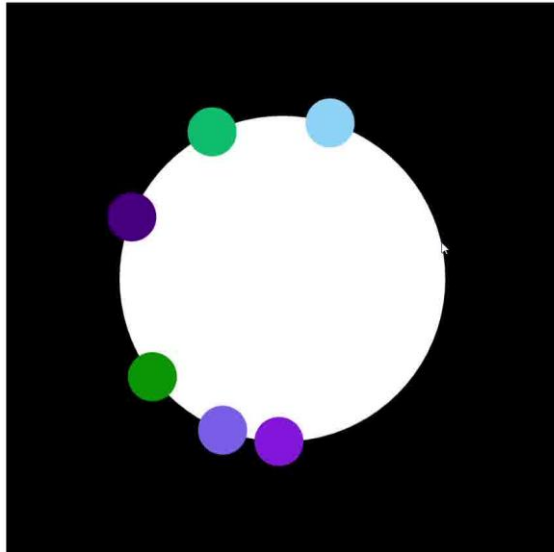

Feature 8: Here we can see the player winning when all the bacteria have been removed

Feature 3&4: The above two images show that when a bacteria is clicked on it disappears right away.

Additional Features: In the above two images, we can see that when the two left bacteria (green and blue) touch one is removed (being absorbed by the other). Leaving only our blue bacteria
